AB Components of ampholytic mixts. which contain at least 4 primary, secondary or tertiary amino groups also contain various combinations of sulfonic, sulfate, phosphonic and carboxylic acid groups. Aminosulfonic and aminophosphonic acids cover wider buffer regions than aminocarboxylic acids and they also have a lower binding capacity for heavy metals. Thus, an aminophosphonic acid mixture was prepared by 15 hr reflux of pentaethylenehexamine in aqueous NaOH with aqueous ClCH₂P(O)(ONa)₂. After cooling and filtration, the mixture was diluted to 30 l., percolated through a column containing Zeo-KARB WRC-21 (H form), reduced to 15 l., and fractionally electrodialyzed.

Publication Title:

NOVEL ANALOGS OF 16-HYDROXYEICOSATETRAENOIC ACID

Abstract:

The present invention includes 16-HETE analogs of formula (I), wherein R, R2 and R3 have the meanings given in the description, which are agonists and antagonists of 16-HETE. The compositions may be formulated in pharmaceutically acceptable formulations. The invention also includes methods and products for inhibiting neutrophil adhesion and neutrophil aggregation using the 16-HETE agonists. One method of the invention involves the administration of a 16-HETE agonist in combination with a thrombolytic agent to a patient suffering from thromboembolic stroke.
